

A photograph of a garden patio. In the foreground, there are several potted plants, including a large spiky plant and some flowering shrubs. The patio is paved with light-colored rectangular stones. In the background, a person is seen performing a handstand on the grass. The sky is blue with some clouds. The text "feel inspired" is written in a white, cursive font across the middle of the image. A teal square is on the left side.

POLISHED RAINBOW

### Granite Setts

100 x 100 x 50mm

The cobbled effect of Granite Setts and its elegant natural shades create a highly sophisticated look. The hand chipped Granite Setts provide an extremely hard wearing and durable surface. Ideal for areas which has a lot of foot traffic or can be used for creating an interesting border to any driveway. Natural markings and colour variation are an inherent characteristic of natural stone, creating a magnificent visual effect.

# rural

## *Natural style*

### **CHESIA PAVING**

Chesia faithfully recreates the natural, rustic style and texture of natural stone, perfect for creating a unique and warm look for your patio or garden – whatever the weather!

# Chesia

## Create

PAVING STONES

Sizes	Unit / m²	Unit weight	m2 / pallet	Unit / pallet	Pallet weight
750 x 500	2.7	25	11.1	30	750
500 x 500	4	16	15	60	960
500 x 250	8	8	7.5	60	480

Thickness: 30mm

Chesia captures the essence of country house living, authentically recreating the tone and texture of natural stone. Chesia can be used externally, but why not bring a warm, rustic feel to your home by laying Chesia indoors? From kitchens to conservatories, it's 30mm thickness makes it ideal for interiors.

## DECORATIVE AGGREGATES

*closer to  
nature*

# Decorative Aggregates

## PEBBLES, GRAVEL, GLASS & CHIPPINGS

From ponds and rockeries to driveways and paths, decorative stones are a versatile way to create interesting features and bring both colour and texture into your garden.

### Measure up

Use the table below to work out how many Large Pacs you will need.

m <sup>2</sup>	1	2	3	4	5
1	4	8	12	16	20
2	8	16	24	32	40
3	12	24	36	48	60
4	16	32	48	64	80
5	20	40	60	80	100

Based on a 50mm (2") average coverage.  
e.g. to cover an area of 3m x 2m at a depth of 50mm, you will require approx. 24 bags  
If you have a larger area to cover, our bulk bags cover between 10-11m<sup>2</sup>

# Edgings

WALLING & EDGING  
BOWLANDSTONE.COM

Edgings not only keep walkways defined, but can also help keep your beds, gravel, soils and other aggregates in place, forming neat and striking borders. Edgings can also be used to define areas of your garden and to surround pathways for a clever, decorative way to separate patios or landscaped areas.

28mm

## 28MM ARTIFICIAL GRASS

28mm tufted synthetic grass, soft to touch and durable making this a great all-rounder

30mm

## 30MM ARTIFICIAL GRASS

30mm tufted synthetic carpet, giving you a natural looking, well-manicured lawn

36mm

## 36MM ARTIFICIAL GRASS

36mm tufted cut pile with a super soft feel, it's an ideal choice for children and pets

38mm

## 38MM ARTIFICIAL GRASS

38mm tufted pile with a luxurious look and feel, it is an ideal choice for gardens that require a bit of 'luxury'

40mm

## 40MM ARTIFICIAL GRASS

40mm tufted synthetic carpet, the closest artificial grass to mimic real turf

## PLAYLAWN TURF

A medium texture, high wear tolerance blend of grasses, ideal for hard wearing lawns and amenity areas. Available in 1m<sup>2</sup> rolls.

Important information 78

# Patio Construction

72

## Step 1 (Planning)

Decide where you want to lay your new patio. First sketch out the area to be paved, showing all dimensions.

Include in the drawing items such as drains, height of damp proof course, the slope or fall of the area and any other constraints eg walls, lawns, steps etc.

Visit Bowland Stone or your nearest stockist to create your laying guide using the Bowland Stone Patio Generator.

## Step 2 (Preparation)

The area to be paved must be firm and compact to avoid any subsidence. If necessary dig out any soft soil and replace with crushed stone preferably with a high dust content. The level of the ground at this stage should be approximately 55mm to 80mm below the final level of the paved area.

## Step 3

At this stage as well as a trowel and shovel, a spirit level will be needed at least the length of the longest slab that is to be laid. Determine the quantities of sand and cement required for 'bedding' the slabs on. As a guide the bed should be between 15mm and 40mm thick and mixed in a ratio of 4 parts sand to 1 part cement, (mixed together in manageable quantities either by hand or a small mechanical mixer).

Decide where to lay the first slab, this is usually a corner slab and probably at the highest point. In most cases a slope of 1:100 is adequate to enable surface water to fall away from the house. It very often helps to use string and mark out the area, which helps to keep the joints at 90 degrees to each other. Continue laying your patio following your laying guide. We recommend that all paving is laid on a full mortar bed.

### Step 4

The method of laying should be such that each slab must not bear any weight for at least one day. Care should also be taken to ensure that cement is kept off the surface of the paving as it can cause staining. The exact position of each slab should be achieved first time. To do this, do not apply excessive force on the slab but check with a spirit level and apply gentle pressure until the exact position is found. It is best to lay full slabs first and then cut any odd shapes and sizes that may be needed.

### Step 5

Unlike all the previous stages, grouting can only be done on a dry day. Building sand should be used, mixed at a ratio of 5 parts sand to one part cement. (Or alternatively use a pointing compound some of which can be used during inclement weather). Bowland Stone colour additive can be used to complement or contrast the overall appearance. The total quantity should not exceed one bucket of grout at a time.

With the use of either a bricklayers pointing trowel or pointing tool, push the mix into the gaps to form a uniform surface to the pointing ensuring that it is kept slightly below the surface of the paving. Excess mix should be swept aside and re-used but do not brush it over the slabs until the mix has become dry. It is essential that the mix is moist but not wet to prevent the possibility of staining.

# Patio Generator

Let our friendly team of advisors help plan your space using our unique **Patio Generator**.

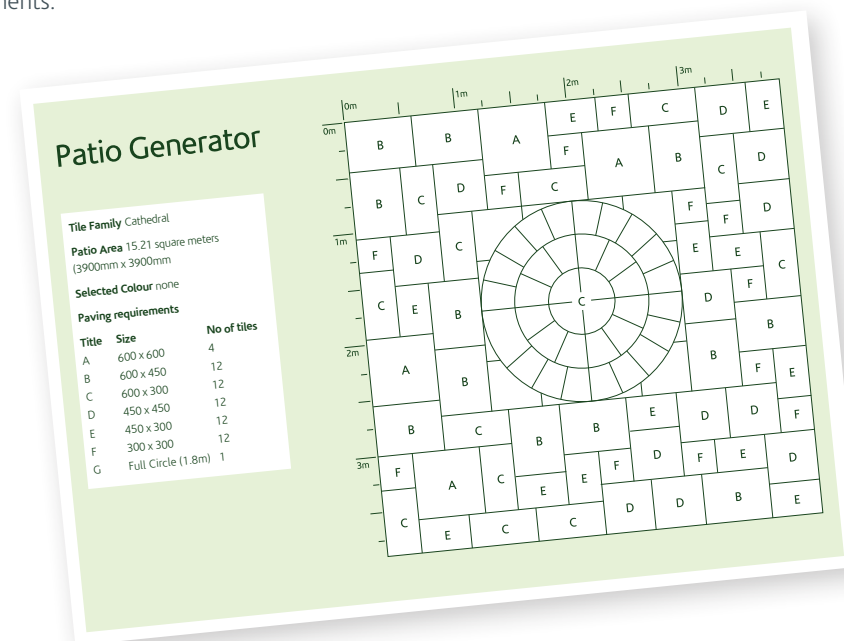

The Bowland Stone Patio Generator creates bespoke paving designs so you can quickly see how your garden will be transformed, providing you with the inspiration you need to get started.

Whatever your space, shape or size, the Patio Generator will produce traditional and random paving patterns to fit. Paving circles and Patio Pacs can also be incorporated. Every design will give your garden a different feel, and our team will help you decide on the ideal layout for your requirements.

Once we've created your perfect patio, you'll receive a detailed plan of your design and be advised on the right products for the job – you're now ready to begin creating the garden of your dreams!

*Ask in store*

Ask our advisors in store or your Bowland Stone Representative for more information on our Patio Generator.

# Caring for your patio

The following tips should help you keep your paving looking at its best for longer.

1. **Regular washing** and brushing should be adequate to maintain your patio.
2. **Before using any cleaning materials** consult your paving stockist to recommend an appropriate product.
3. **Test a small area** before cleaning the patio.
4. **If using patio cleaner, use sparingly** (once or twice during the lifetime of the patio) as this may affect durability.
5. **Sealants can be used** but they can affect the colour of the paving.
6. **Do not use salt** to de-ice your patio.
7. **Dark patches are due to differential weathering and exaggerated by efflorescence\***. As with efflorescence the dark patches will generally disappear in time.
8. **Fungal and algae growths** can be cleared by spraying with fungicide.
9. **Bowland Stone paving** can be used indoors as well as out.
10. **We do not** recommend the use of a pressure washer.

Please note that although sometimes unsightly, blemishes or stains are unlikely to affect the performance of the paving. Always follow manufacturer's instructions when using cleaning equipment or materials.

\*Please refer to page 78 for further information.

# Plan ahead

# Important information

## Efflorescence

All concrete products may suffer the temporary phenomenon of efflorescence, caused by the migration of soluble salts to the surface. Efflorescence can sometimes appear as white powder, or just an apparent lightening or fading of colour. This is caused by the migration of soluble salts to the surface, the most common being calcium hydroxide which reacts with atmospheric carbon dioxide to form calcium carbonate – a white deposit of low water solubility becoming apparent as the surface dries.

## Efflorescence Chemistry

Calcium Hydroxide  $\text{Ca}(\text{OH})_2$

+

Carbon Dioxide ( $\text{CO}_2$ )

+

Calcium Carbonate ( $\text{CaCO}_3$ )

+

Water ( $\text{H}_2\text{O}$ )

## Removal

Ideally it is better to let the phenomenon to disappear naturally, but it can be removed chemically by using proprietary acid washing agents or brick/patio cleaners in accordance with manufacturers instruction. Care must be taken and protective clothing worn.

However, both techniques can alter the appearance of the concrete by changing the surface texture and may also damage the concrete surface.

Before attempting to remove efflorescence by these techniques it is recommended that trials should be carried out on samples, or a limited area, in order to assess the effect on the appearance.

Efflorescence is a natural phenomenon and one that does not affect the durability and performance of the concrete in question.

## Handling

Ensure products are on level ground before unwrapping and remove wrapping and banding with the appropriate tools; it is recommended that safety goggles and gloves are worn. To avoid breakages, chipping and other damage, products should always be handled with care and either left on level ground or supported in some way to prevent falling over. Movement in transit can sometimes cause minor scuffing but this will disappear in time. If in any doubt, do not lay and consult our sales team.

## Road Salt & Pressure Washers

We do not recommend the use of road salts during freezing/thawing conditions. Salts can affect both the appearance and durability of the paving. We also do not recommend the use of Pressure Washers as damage may occur to the surface of the paving.

## Colour

Due to the phenomenon of differential curing, slight colour and shade variations do occur in individual coloured concrete products. Site conditions, seasonal manufacture or naturally occurring variations in the aggregates used can also cause variations. This is generally considered to enhance the natural stone effect and the colours will invariably weather together in time.

## Prevention

It is not possible to predict precisely when, or if, efflorescence will occur as well as relatively minor changes in the quality of the concrete, the curing conditions and the environment can cause its formation.

## Natural Stone

Unavoidable colour and thickness variations occur within the natural stone ranges. Our natural stone is sourced from suppliers who are registered with the 'ethical trading initiative'.

Silver Grey like all Natural Stone Sandstone products vary with differing geological conditions. Such variations can lead to small particles of ironstone within the product creating a darkening of the surface with natural weathering. Being pale in colouration, this natural weathering is more obvious with Silver Grey than with the other natural colours. Differential weathering can cause patchy dark discolourations on the surface of individual units, this will generally diminish over time and will not affect long term performance. Natural stone may develop added marking, deposits or patches as mineral content oxidises. All products can develop algae and organic growths under certain environmental conditions and may require cleaning. Areas adjacent to borders, plant pots and trees may discolour from transfer of plant-life; specialist maintenance advice may need to be sought.

## Ordering

In respect of this it is suggested that when laying paving the flagstones are ordered as a total batch and drawn from several packs at the same time to enhance any colour variation. Choice of colours should be made from actual materials rather than the colour photographs herein.

## Weathering

Just as natural stone the appearance of concrete products will weather and change, especially after a period of time exposed to the elements.

## Sizes

Bowland paving is manufactured to capture the authenticity of natural slabs and as such they do vary in thickness. All sizes are nominal and customers should check with their supplier.

Fissures can occur on larger individual slabs as a natural result of shrinkage, this does not alter the durability of the product.

## Storage

Prior to laying cover all paving and store in a vertical position. Bowland Stone will not take any responsibility for any paving that has developed water marks or stains due to inadequate storage.

## Liability

Liability in respect of any statements, conditions, warranties and representations made on behalf of Bowland Stone is limited in accordance with the terms set out in Standard Conditions of Sale. While every effort is made to give sound advice, Bowland Stone cannot accept any responsibility for any loss, damage or injury sustained as a result of following it.

Bowland Stone will not take any responsibility or liability in respect of products being used for any purpose other than those for which they were intended by the manufacturers. Due to our continuous evolution of product design and improvement our range is subject to change without notice. Customers should check that information is up to date.

## Regional Variations

When ordering materials, order from source as colours and finishes vary regionally.

**Should a product reach you in an unsatisfactory condition, and other than a naturally occurring one described previously, the defect would have to be apparent prior to laying. It is at this point that the supplier should be notified of such a fault, allowing time for the rejected product to be replaced. If the complaint is raised after laying the product, no responsibility will be accepted for any relaying or removing costs. Bowland Stone will not be liable for fair wear and tear, wilful damage or negligence of the customer or abnormal conditions.**
